

CLOTHING INFORMATION APPLICATION

DESCRIPTION:

Gone are the days when we had to visit the mall and spend an entire day to check which brand store has got what deals just to buy a pair of clothes. To address this, Clothing Info Application has been developed. Whether it is to know the trends or suitable clothing to wear for different seasons or to know the traditional clothing of a certain country.

USER OF THE APPLICATION:

The end user of this application will be the buyer of clothing in one or more category as per his/her choice.

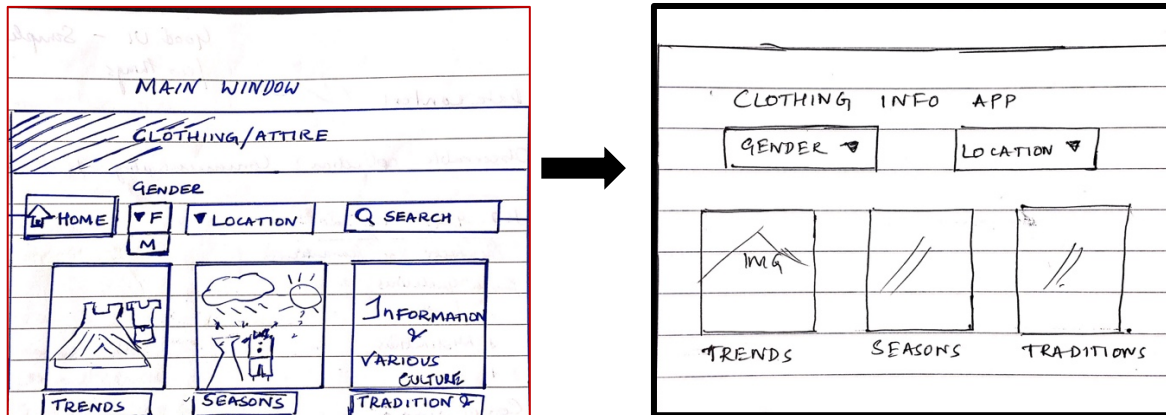

FUNCTIONALITY:

This Desktop application will have the following functionalities:

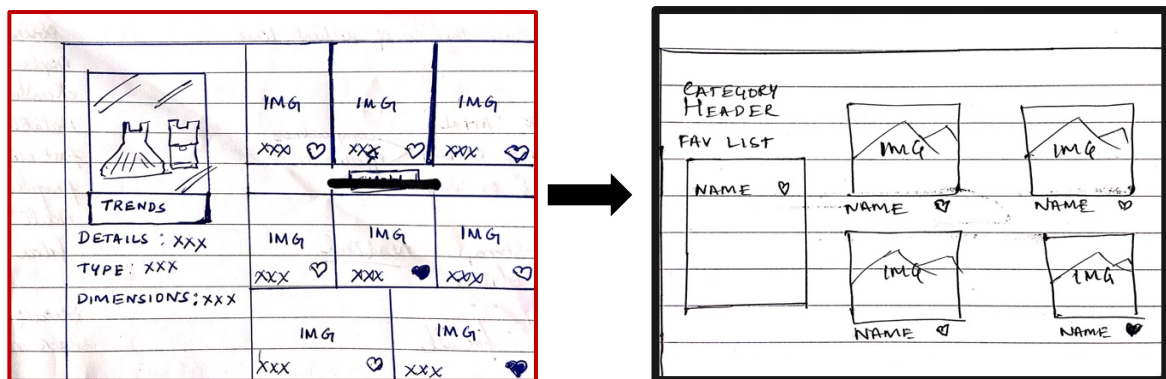

1. User will be able to choose from the three categories given.
 - Trends
 - Seasons
 - Traditions
2. Based on the selection of category, user will be navigated to that window where various clothing images of that category will be shown
3. User can favorite the clothing accordingly and can view it.
4. If the user wishes to know the details of a certain clothing, user will be navigated to the window with the details like description, size, availability, price.
5. User will be then navigated to the respective website where he/she can purchase the clothing.

WIREFRAMES:

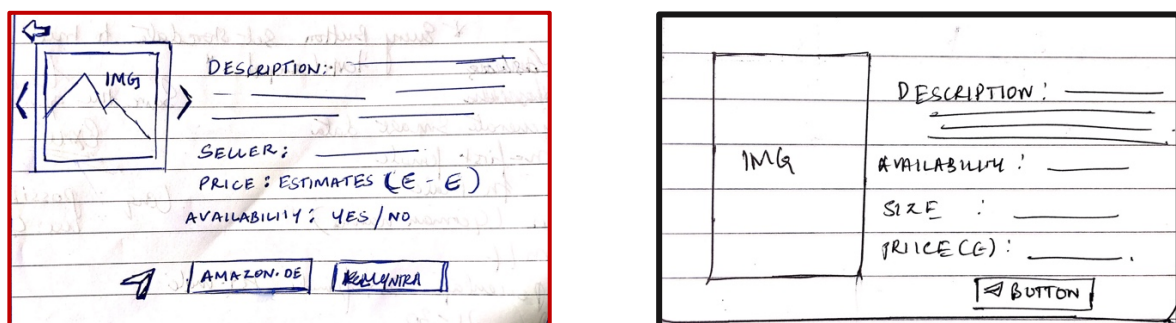

The first window of the desktop application is given below

Modifications : Search criteria was removed because the end user will get to explore on all the three categories and get to know about the clothing.

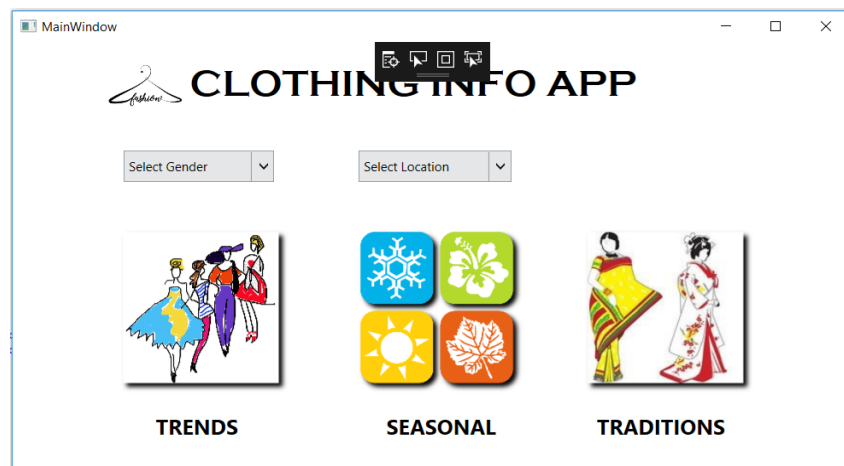

Modifications : Favorite list was added and dimensions of the image are kept same.

Modifications : No multiple images will be added because the user will be redirected to the web page of that clothing where already multiple images will be present.

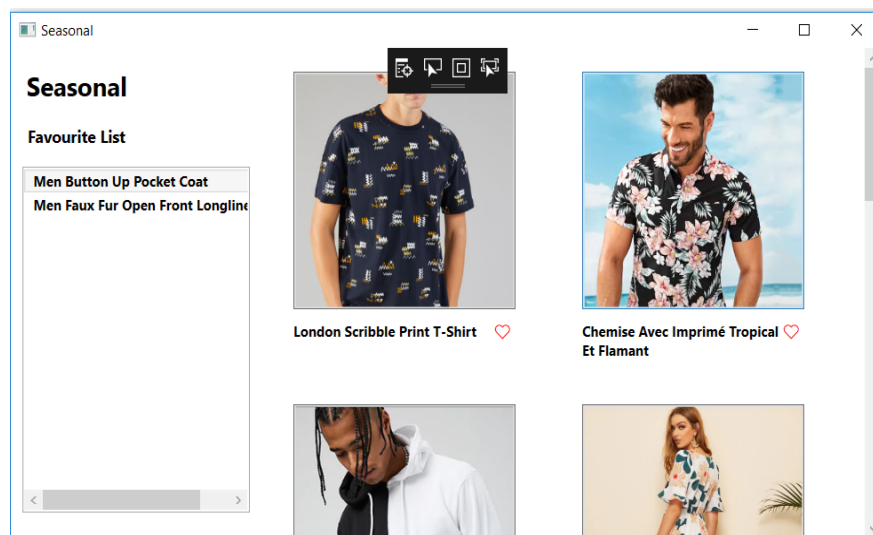

USER INTERFACE:

User Interface has been done according to the that of the modifications of the wireframe. Once the desktop application is opened, the main window will be displayed with the three categories.

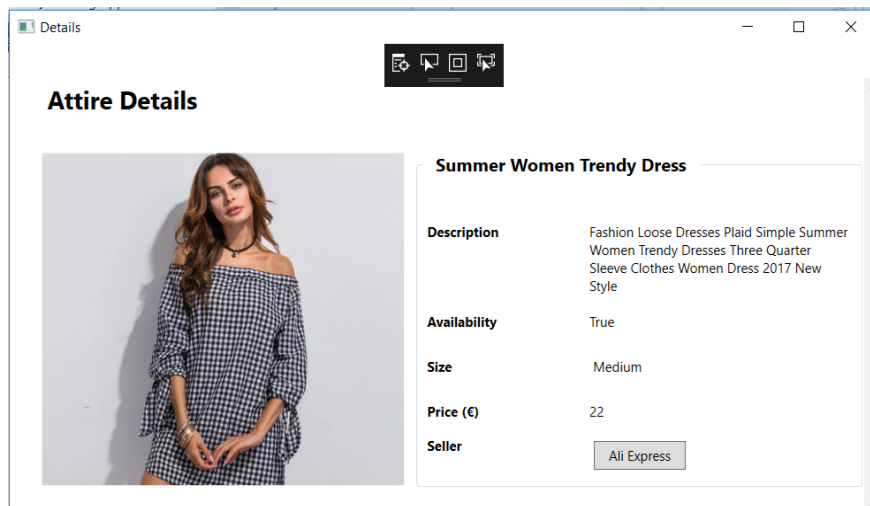

User will now be able to view the clothing of each category of his/her choice. User can filter the gender and country and make the search easier with the below details.

User will also be able to make a clothing a favorite, and all the favorited clothing will go under the list to make it easier for the user.

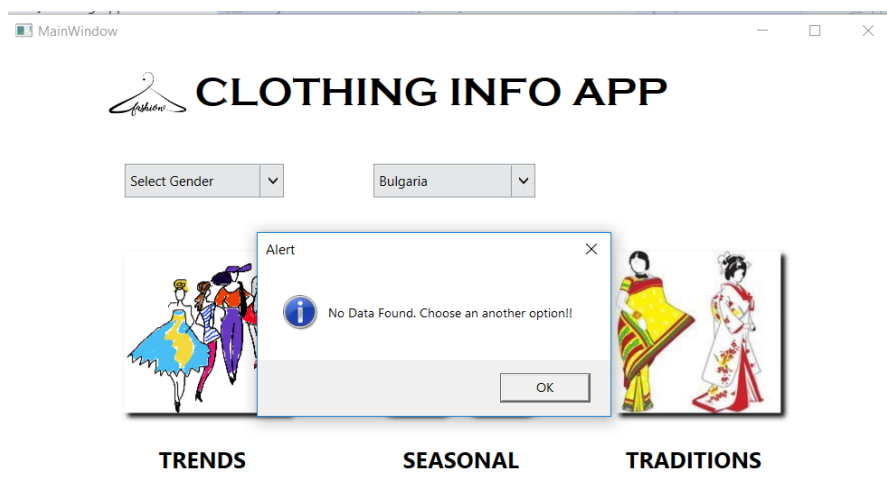

Once the user clicks on any of the images, it will lead to the below window where the user will be able to view the details of the clothing.

DIALOG PRINCIPLE :

ERROR TOLERANCE : User will get the Message-Box window incase with the no images found in a certain category.

GESTALT PRINCIPLES USED:

PROXIMITY : The ComboBox and Icons of the category are in close proximity.

SIMILARITY : All the Images are in square shape and are kept consistent in size throughout the application.
